

B4T

La demande en réfrigérants naturels tels que le CO2 augmente également pour les faibles puissances. Pour des applications au CO2 transcritique nécessitant des pressions approchant 140 bar, le B4TU se présente comme un choix évident. Le B4TU est optimisé pour des puissances de refroidissement de gaz faibles (jusqu'à 30 kW en tant que refroidisseur de gaz). Sa compacité et sa légèreté le rendent adapté aux applications de la chaîne du froid (condenseur dans un circuit d'eau fermé, économiseur et condenseur dans les unités de condensation, récupération de chaleur) et aux pompes à chaleur (évaporateurs, refroidisseurs de gaz, échangeurs thermiques à aspiration de gaz).

Spécifications de base
